

United States of America  
Department of Transportation—Federal Aviation Administration  
**Supplemental Type Certificate**

*Number* SA4964NM

*This certificate, issued to* **Rosen Sunvisor Systems  
86365 College View Road  
Eugene, OR 97405**

*certifies that the change in the type design for the following product with the limitations and conditions therefor as specified hereon meets the airworthiness requirements of Part \* of the \* Regulations.*

*Original Product—Type Certificate Number:* \*See attached FAA Approved Model List (AML)  
*Make:* No. SA4964NM for list of approved airplane  
*Model:* models and applicable airworthiness regulations

*Description of the Type Design Change:* Installation of an NSA sunvisor system for the pilot and copilot in accordance with FAA approved Rosen Drawings as listed on the FAA AML of this STC, or later FAA approved revisions.

*Limitations and Conditions:* Approval of this change in type design applies to the above model aircraft only. This approval should not be extended to other aircraft of this model on which other previously approved modifications are incorporated unless it is determined that the interrelationship between this change and any other previously approved modifications, including changes in type design, will introduce no adverse effect upon the airworthiness of that aircraft. A copy of this Certificate and AML SA4964NM, dated October 5, 1990, or later FAA approved revision, shall be maintained as part of the permanent records for the modified aircraft.

If the holder agrees to permit another person to use this certificate to alter the product, the holder shall give the other person written evidence of that permission.

*This certificate and the supporting data which is the basis for approval shall remain in effect until surrendered, suspended, revoked, or a termination date is otherwise established by the Administrator of the Federal Aviation Administration.*

*Date of application:* March 30, 1990

*Date reissued:* March 24, 2003

*Date of issuance:* October 5, 1990

*Date amended:* March 24, 2003

*By direction of the Administrator*

*(Signature)*  
Acting Manager, Seattle Aircraft  
Certification Office  
*(Title)*

Any alteration of this certificate is punishable by a fine of not exceeding \$1,000, or imprisonment not exceeding 3 years, or both.

This certificate may be transferred in accordance with FAR 21.47.

**Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly  
(p/n R1180005-0)**

This ICA must be followed when the R1180005 Sunvisor system is installed in accordance with Supplemental Type Certificate, (STC) No. SA4964NM, dated October 5, 1990, amended March 24, 2003.

The information contained in this document supplements or supersedes the basic manual only in those areas listed herein. For limitations, procedures, and performance information not contained in this manual, consult the basic aircraft ICA or Maintenance Manual.

**STATEMENT OF Rev E CERTIFICATION**

This manual complies with Federal Aviation Association (FAA) Airworthiness Requirements Part 23.

FAA Acceptance: \_\_\_\_\_

The above certification does not apply to revisions or amendments made after the date of initial certification by other Approved Organizations. Revisions or amendments made by other Approved Organizations must be separately certified and recorded on separate record sheets

**Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly  
(p/n R1180005-0)**

**Introduction**

**1. General**

- a. This Rosen Product Maintenance Manual provides use, maintenance and supplemental airworthiness instructions for the cockpit Sunvisor system used on the Cessna Cardinal (Cessna model 177) aircraft.
- b. Rosen reserves the right to revise this document for changed procedures, improved parts or changes to the system or components.
- c. All technical support, spare sales, repairs or modifications are to be directed directly to Rosen Sunvisor Systems LLC. RSS must be contacted for future revision of this document as it is possible this does not contain the latest revisions.

**2. Revision Service**

Current revision status and revisions to this document may be obtained from Rosen Sunvisor Systems' website: [www.rosenvisor.com](http://www.rosenvisor.com). We recommend that you periodically check to make sure you are using the most current version.

**Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly  
(p/n R1180005-0)**

**Fault Isolation**

**1. General**

- a. This section identifies Probable Causes and Corrections for possible faults.

<b>Problem</b>	<b>Probable Cause</b>	<b>Corrective Action</b>
Visor does not extend on arm	Tension Thumb knob too tight	Loosen knob and slide using knob
Lens does not rotate smoothly on vertical axis	Vertical pivot tension incorrectly set	Re-tension vertical pivot
Lens does not rotate smoothly on horizontal axis	Horizontal pivot tension incorrectly set	Re-tension horizontal pivot

**Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly  
(p/n R1180005-0)**

**Product Description**

**1. General**

- a. The Rosen Sunvisor System consists of two visor assemblies which have been designed to improve pilot comfort during standard cockpit operations. The visor assemblies are fastened to the airframe in the same mounting positions as the factory installed visors.

**Installation Instructions**

This is an FAA STC'd Installation requiring a log book entry upon completion.

**Hardware (included):**

- |                    |   |
|--------------------|---|
| (4) MS16996-14BP   | #10-32x1 Socket Head Cap Screw                    |
| (4) AS-10          | #10-32 Black Washer                               |
| (4) A10K80         | #10-32 Rivnut (for cockpits without handle grips) |
| (1) 3/32 Allen Key |   |
| (1) 9/64 Allen Key |   |

Installation should take approximately 4 to 6 hours.

- Remove the old auto style visors by pulling them outboard.
- Most Cardinals have hand grips on the door posts and your unit is designed to pick up the top #10 fastener from this grip. Aircraft without this handgrip will need to install an A10K80 rivnut (provided). Figures to the right illustrate the handgrip and location for rivnut if needed.

**Aircraft with Handgrips**

1. First, remove the small metal cover over the handgrip screws. This can be done using a small common screwdriver and prying or popping them off.
2. Remove the two #10 screws that secure the handgrip.
3. Take the Pilot's NSA visor and using the long #10 screw provided (MS16996-14B), put it through the slot in the bottom of the bracket and temporarily install it in the top handgrip screw hole as shown. The top of the arm should barely touch the top trim.
4. Position the visor towards the rear of the aircraft and extend the sliding arm. The top of the visor should be parallel to the top of the door frame with the door open. Use a pencil to mark either side of the bracket on the door frame liner.

## Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly (p/n R1180005-0)

5. Rotate the visor to the front. The visor arm should just fit under the center overhead console while the bracket is still between the pencil marks. The flat surface of the bracket should be parallel with the flat surface of the door post where the screw is attached.
6. Check your marks very carefully by going through the above steps several times to assure a perfect fit.
7. The trim pieces should be marked as shown.
8. Remove the top royalite trim piece that runs around the top of the pilot's window.

9. Remove the royalite trim piece that covers the door post. Be aware that the royalite may be very brittle from sitting in the sun and extreme care should be used when removing and installing it. If it has been cracked, or gets a small crack, you may want to consider using duct tape on the back side as reinforcement. We have seen this done on different Cessna trim pieces with good results.
10. Use a 3/16" drill or smaller to drill through the trim between the marks as shown.

11. Trim the hole so the 1/4" by 1" bracket will pass through the hole.

12. Using a long wood pencil, aligned with the pencil marks and flush with the flat surface on the front side, mark the opposite side of the Royalite as shown.

13. The pencil should have left marks that you can see from the other side. Drill through these and square out a small slot with a file.

14. Slide a 1" rule through the slot and align it with the pencil marks. Enlarge the back hole as necessary until the rule slides through as shown.

that is royalite

that the the

could look from the back side of the royalite with the rule protruding. Again take your time and make sure the trim is cut correctly.

15. Because of the blocking plate

on the back of the bracket, the back hole in the will need to be approximately 1/2" by 1". It is important to use the rule on the flat surface so back hole can be proportioned correctly and in right plane. The figure shows a view if you

could look from the back side of the royalite with the rule protruding. Again take your time and make sure the trim is cut correctly.

16. When the pilot's visor bracket with the backing bar can slide into the trim with the slots you have just cut, re-install the top piece of trim that runs around the top of the window and into the center control.

## Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly (p/n R1180005-0)

17. Now mount the visor and bracket without the door post trim. You may need to cut a small piece of the insulation to get the bracket to fit tight against the door post. This will allow you to adjust the backing bar to the contour of the door post and keep the bracket from turning.
18. Adjust the bracket so the top just barely hits the top trim and the extended visor is parallel to the top of the door frame (door open) when it is rotated and extended to the rear. Tighten the backing bar against the door post with the hex key provided.
19. Your Pilot side mounting bracket is now in place. Remove the visor arm and mounting block from the vertical mounting post.
20. Remove the overhead trim piece.
21. Now slip the visor bracket through the slots in the door post trim and carefully re-install the door post trim. Align the small trim screw holes and then install the bottom handgrip fastener and install the MS16996-14B screw provided in the top location.
22. Check to insure the top of the visor bracket is not hitting the windscreen. If it does loosen the visor bracket and reposition it to provide clearance and retighten.
23. Replace the top trim piece and erase any pencil marks that might be left on the trim.
24. Replace the visor arm assembly and retaining screw and tension to provide tension that is free but not loose.
25. Repeat for the co-pilot's side.
26. Place the FAA STC and AML (if appropriate) in the Aircraft Maintenance Log and make an installation entry.

### **Aircraft without Handgrips**

1. This installation is easier in that no special work on the trim needs to be done, but Rivnuts need to be installed in the door post to secure the bracket. (This is the same type of Rivnut and location Cessna uses for the hand grip installation.)
2. Use a pencil to mark the approximate location for the fastener as shown.
3. Hold the bracket of the pilots visor assembly against the door post so you can see the mark in the slot and angle the bracket so that it just hits the overhead trim.
4. Holding the bracket stationary swivel the visor to the rear and make sure the unit is parallel and in line with the door line (door open).
5. As with the handgrip instructions, pencil mark the outside of the bracket on the trim.
6. When swiveled forward the visor should just miss the center overhead console.

## Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly (p/n R1180005-0)

7. When the front and side criteria are met, make a pencil mark in the center of the bottom bracket slot.
8. Adjust the blocking plate so that it rides on the side of the door post.
9. Mark the front and rear of the bracket bottom slot then make a mark 0.1" in from either end as shown.

**Note:** There are control cables and wires located in the doorpost channel. Exercise care in these next operations and verify proper function of all system after completion.

10. When you are sure of the bracket location and your slot marks are centered and correct, drill a 1/8" hole through the trim and door post. **Use a Drill Stop set for 1/8 inch penetration. DO NOT DRILL INTO THE AIRFRAME CAVITY.** It is okay to not penetrate the metal framework as long as the drill has marked the location.
11. Remove the door post trim (you may need to remove the front overhead trim piece as well).
12. Use a 1/4 inch drill with a Drill Stop set to 1/8-inch penetration into the larked location in the frame metal.
13. Make a small notch for the locking tab on the Rivnut. Both 'P' and 'H' should be ~1/16 inch.
14. Install the A10K80 Rivnuts, with the key engaging the notch, into the 1/4" holes using appropriate tooling.
15. Enlarge the 1/8-inch hole in the trim to 1/2 inch to accommodate the head of the installed Rivnut.
16. Re-install the trim
17. Using the #10-32 Socket head cap screws provided install the pilot's visor.
18. Repeat for the co-pilot's side.
19. Place the FAA STC and AML (if appropriate) in the Aircraft Maintenance Log and make an installation entry.

### **Removal**

- a. Reverse installation procedure.

### **Weight and Balance**

Because operators calculate Weight and Balance differently the actual station number must be determined by the installer's calculations.

With the visor located in the stow position (in forward position and folded up) this system adds 1.06 lbs. located at the mount point of the visor. When the original visors are removed, they must be weighed and removed from the calculation.

**Rosen Sunvisor Systems PMM / IPC for Sunvisor Assembly  
(p/n R1180005-0)**

**Repair**

**1. General**

- a. All components that do not meet the requirements for continued use must be replaced.

**Instructions for Continued Airworthiness**

**(On the ground only)**

- Periodically clean the lenses with a soft cloth, mild soap and water or Rosen Cleaner, Polisher and Protectant. Do not use abrasives on the lens.
- Periodically adjust the pivot tensions on the visor assemblies.
- Periodically clean slide with a no residue alcohol based cleaner and inspect for wear and damage.

**Airworthiness Limitations**

The Airworthiness Limitations Section is FAA approved and specifies maintenance required under §43.16 and §91.403 of the Federal Aviation Regulations unless an alternative program has been FAA approved.

There are no airworthiness limitations associated with this installation.
