

# Installing vinyl graphics

## Step 1

Peel protective coating from one side of lens where graphics will be applied. Place the lens on a sturdy flat surface and clean the lens with a non-alcohol based cleaner.

## Step 2

Peel backing from sticker and place one edge onto the lens in the desired location. Note that Flame, Wave, and Muscle graphics have a dedicated right and left side.

## Step 3

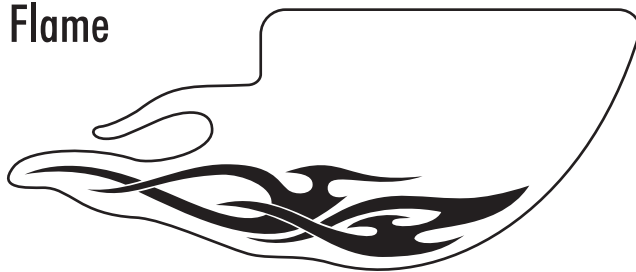

Progressively rub the rest of the sticker into place using a back and forth motion so that no bubbles are trapped under sticker. Press firmly on the graphic to activate the adhesive. A plastic squeegee is recommended. They can be found at most automotive parts stores.

## Step 4

Slowly peel away the clear application tape making sure that the graphic is sticking properly. If an edge is not sticking, lay the application tape back down and press firmly on the graphic again.

## Recommended graphic locations

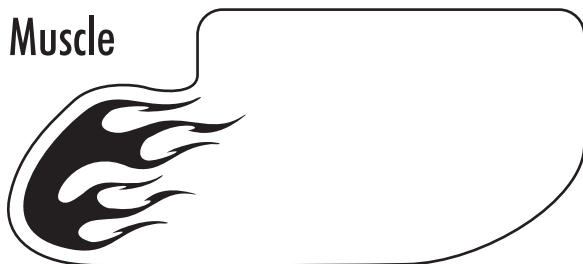

Flame

Wave

Muscle

Razor
